

EKO SAPUTRA

GAME PROGRAMMER

Jl. Nangka No.4A, Ngringin, Condongcatur, Depok, Sleman, DIY 55281 [085758914087] |
[ekosaputra28a@gmail.com]

Highly analytical Game Development Student at Universitas Amikom Yogyakarta with a strong focus on systems engineering and logic optimization. Expert at translating complex mechanics into playable code using C# and Unity Engine. Dedicated to crafting high-performance, bug-free gameplay systems through rigorous debugging, efficient system architecture, and a deep understanding of physics-based simulations. Eager to contribute technical skills to professional game development projects.

EDUCATION

UNIVERSITAS AMIKOM YOGYAKARTA | 2023 – Present

B.Sc. in Information Technology – Concentration in Game Development (6th Semester)

- Current GPA: 3.93
- Relevant Coursework: Object-Oriented Programming (C#), Game Engine Fundamentals (Unity), Data Structures, Computer Graphics, Game Design, and Artificial Intelligence for Games.

TECHNICAL PROJECTS

VR STUDY: WORD ARCHITECT (Educational VR) | Lead Programmer

- Engineered a 3D spatial puzzle system where players must unscramble randomized letter blocks to solve word challenges and unlock progression-gated doors.
- Developed a structured NPC Guide system featuring stage-based state logic, synchronized animations, and an organized dialogue/chat panel system.
- Optimized VR performance to maintain a stable high frame rate using C# and Unity, ensuring a smooth experience for users with dyslexia during interactive learning stages.

SPRING TIDE (Action-Adventure Game) | Unity, C#Lead Programmer

- Developed a dynamic boat controller system featuring variable speed acceleration, deceleration, and responsive steering mechanics using C#.
- Implemented a physics-based water system with real-time wave buoyancy and displacement to affect vessel stability.
- Engineered enemy AI (Octopus/Kraken) with specialized behavior patterns for player pursuit and obstacle-based encounters.

E-WASTE MANAGEMENT (Interactive Educational App) | Lead Programmer

- Developed a 3D disassembly system allowing users to deconstruct electronic devices into individual components.
- Implemented a custom Drag-and-Drop mechanic and object-sorting logic for realistic waste separation.
- Managed complex 3D object hierarchies and transformation logic to ensure precise user interaction during disassembly.

TECHNICAL SKILLS

- Programming: C# (Advanced), OOP, Data Structures.
- Game Development: Unity Engine, Unity UI (UGUI), Physics Simulation.
- Systems & Architecture: Scriptable Objects, Prefab Workflow, Design Patterns (Singleton, State).
- Tools: Version Control (Git/GitHub), Visual Studio, Performance Profiling.
- Other Skills: Technical Problem Solving, Analytical Thinking, Game Math & Physics.

PERSONAL SKILLS & SOFTWARE

- Personal Skills: Public Speaking, Fast Learner, Team Collaboration, Attention to Detail, Logical Reasoning, Technical Problem Solving.
- Software & Tools: Unity Editor, C#, Git/GitHub Desktop, Visual Studio, Microsoft Office Suite.
